SHORTENED STATUTORY PERIOD OF RESPONSE	MAIL DATE	DELIVERY MODE
3 MONTHS	04/23/2007	PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

If NO period for reply is specified above, the maximum statutory period will apply and will expire 6 MONTHS from the mailing date of this communication.

Office Action Summary	Application No.		Applicant(s)	
	10/525,783		KEITH, RICHARD	
	Examiner		Art Unit	
	Eric S. Olson		1623	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 13 March 2007.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 15 and 24-28 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☒ Claim(s) 27 is/are allowed.
- 6) ☒ Claim(s) 15, 24-26 and 28 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

Detailed Action

This office action is a response to applicant's communication submitted March 13, 2007 wherein claims 15, 27, and 28 are amended. This application is a national stage application of PCT/SE03/01352, filed September 1, 2003, which claims priority to foreign application SE0202598-9, filed September 2, 2002.

Claims 15 and 24-28 pending in this application.

Claims 15 and 24-28 as amended are examined on the merits herein.

Applicant's arguments, submitted March 13, 2007, with respect to the rejection of instant claims 15, 24, and 26-28 under 35 USC 103, for being obvious over Gordon et al. in view of Jick et al. further in view of Stalker et al., have been fully considered and found to be persuasive to remove the rejection. Therefore the rejection is withdrawn.

Applicant's arguments, submitted March 13, 2007, with respect to the rejection of instant claims 15, 25, and 26-28 under 35 USC 103, for being obvious over Peters et al. in view of Jick et al. further in view of Stalker et al., have been fully considered and found to be persuasive to remove the rejection. Therefore the rejection is withdrawn.

Applicant's arguments, submitted March 13, 2007, with respect to the rejection of instant claims 15, 25, and 26-28 under 35 USC 103, for being obvious over Eifion et al. in view of Jick et al. further in view of Stalker et al., have been fully considered and found to be persuasive to remove the rejection. Therefore the rejection is withdrawn.

The following new grounds of rejection are introduced:

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 15, 24, 26, and 28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gordon et al. (US patent 5902814, of record in previous office action) in view of Scolnick (PCT international publication WO95/06470, Included with PTO-892) further in view of Stalker et al. (of record in previous office action) Gordon et al. discloses a number of spiro-azabicyclo[2.2.2]octane compounds, including spiro[1-azabicyclo[2.2.2]octane-3,5'-oxazolidine]-2'-one hydrochloride. (column 1, lines 30-49, column 6, line 33 – column 7, line 33) These compounds are useful in the manufacture of a medicament for the treatment of a number of conditions including Alzheimer's disease. (column 4, lines 27-41, column 5, lines 10-16) Gordon et al. does not disclose a combination of this compound with rosuvastatin, a pharmaceutical composition comprising such a combination, or a method of treating Alzheimer's disease using such a composition.

Scolnick et al. discloses a method for treating and arresting the development of Alzheimer's disease by administering an HMG-CoA reductase inhibitor such as Lovastatin, simvastatin, pravastatin, or fluvastatin. (P. 3, lines 25-32)

Stalker et al. discloses that Rosuvastatin has the same or similar function as simvastatin, lovastatin, and fluvastatin, being an HMG-CoA reductase inhibitor.

It would have been obvious to one of ordinary skill in the art to modify the invention of Gordon et al. by combining spiro[1-azabicyclo[2.2.2]octane-3,5'-oxazolidine]-2'-one hydrochloride with rosuvastatin to produce the combinations described by instant claims 15 and 24, and the pharmaceutical composition of claim 26, and by administering the composition to a patient suffering from Alzheimer's disease as described by instant claims 27 and 28. One of ordinary skill in the art would have been motivated to produce this combination because spiro[1-azabicyclo[2.2.2]octane-3,5'-oxazolidine]-2'-one hydrochloride and statins were known to be useful for the treatment of Alzheimer's disease and because Stalker et al. discloses that rosuvastatin functions by the same mechanism as other statins mentioned by Scolnick as being useful for treating Alzheimer's disease. One of ordinary skill in the art would reasonably have expected success because combining known therapeutic compounds, adding a pharmaceutically acceptable carrier, and administering the composition to a patient is well within the ordinary and routine level of skill in the art.

It has been held that it is *prima facie* obvious to combine two compositions, each of which is taught by the prior art to be useful for the same purpose in order to practice a third composition for the very same purpose. The idea of combining them flows logically from their having been taught individually in the prior art. See *In re Kerkhoven*, 205 USPQ 1069, CCPA 1980.

Thus the invention taken as a whole is *prima facie* obvious.

Claims 15, 25, 26, and 28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Peters et al. (PCT international publication WO9854189, of record in previous office action) in view of Scolnick (PCT international publication WO95/06470, Included with PTO-892) further in view of Stalker et al. (of record in previous office action)

Peters et al. discloses a range of nicotininc receptor agonists useful for treating a number of diseases including Alzheimer's disease and Parkinson's disease. (p. 4, lines 25-36) The compounds have a general formula which includes (2'R)-5'-(3-furanyl)spiro[1-azabicyclo[2.2.2]octane-3,2'-(3'H)-furo[2,3-b]pyridine] within its general teaching. (p. 5, line 24 – p. 6, line 15, p. 9, lines 14-21) Peters et al. does not teach a composition of (2'R)-5'-(3-furanyl)spiro[1-azabicyclo[2.2.2]octane-3,2'-(3'H)-furo[2,3-b]pyridine] and rosuvastatin or a method of treating Alzheimer's or Parkinson's disease by administering such a composition.

Scolnick et al. discloses a method for treating and arresting the development of Alzheimer's disease by administering an HMG-CoA reductase inhibitor such as Lovastatin, simvastatin, pravastatin , or fluvastatin. (P. 3, lines 25-32)

Stalker et al. discloses that Rosuvastatin has the same or similar function as simvastatin, lovastatin, and fluvastatin, being an HMG-CoA reductase inhibitor.

It would have been obvious to one of ordinary skill in the art to modify the invention of Peters et al. by combining (2'R)-5'-(3-furanyl)spiro[1-azabicyclo[2.2.2]octane-3,2'-(3'H)-furo[2,3-b]pyridine] with rosuvastatin to produce the

Art Unit: 1623

combinations described by instant claims 15 and 25, and the pharmaceutical composition of claim 26, and by administering the composition to a patient suffering from Alzheimer's disease as described by instant claims 27 and 28. One of ordinary skill in the art would have been motivated to produce this combination because (2'R)-5'-(3-furanyl)spiro[1-azabicyclo[2.2.2]octane-3,2'-(3'H)-furo[2,3-b]pyridine] and statins were known to be useful for the treatment of Alzheimer's disease in the prior art and because Stalker et al. discloses that rosuvastatin functions by the same mechanism as other statins mentioned by Scolnick as being useful for treating Alzheimer's disease. One of ordinary skill in the art would have been motivated to specifically use (2'R)-5'-(3-furanyl)spiro[1-azabicyclo[2.2.2]octane-3,2'-(3'H)-furo[2,3-b]pyridine] in the composition because this compound is within the general range of compounds disclosed by Peters et al. to be useful for treating Alzheimer's disease. One of ordinary skill in the art would reasonably have expected success because combining known therapeutic compounds, adding a pharmaceutically acceptable carrier, and administering the composition to a patient is well within the ordinary and routine level of skill in the art.

It has been held that it is *prima facie* obvious to combine two compositions, each of which is taught by the prior art to be useful for the same purpose in order to practice a third composition for the very same purpose. The idea of combining them flows logically from their having been taught individually in the prior art. See *In re Kerkhoven*, 205 USPQ 1069, CCPA 1980.

Thus the invention taken as a whole is *prima facie* obvious.

Claims 15, 25, 26, and 28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Eifion et al. (US patent application publication US2003/0018042 A1, of record in previous office action) in view of Scolnick (PCT international publication WO95/06470, Included with PTO-892) further in view of Stalker et al. (of record in previous office action)

Peters et al. discloses the compound (2'R)-5'-(3-furanyl)spiro[1-azabicyclo[2.2.2]octane-3,2'-(3'H)-furo[2,3-b]pyridine]. (p. 1, paragraphs 0007-0009) This compound is useful for the treatment of Alzheimer's disease (paragraphs 0017 and 0023) and may be prepared as a pharmaceutical composition along with a pharmaceutically acceptable carrier. (paragraphs 0028-0035) Peters et al. does not teach a composition of (2'R)-5'-(3-furanyl)spiro[1-azabicyclo[2.2.2]octane-3,2'-(3'H)-furo[2,3-b]pyridine] and rosuvastatin or a method of treating Alzheimer's or Parkinson's disease by administering such a composition.

Scolnick et al. discloses a method for treating and arresting the development of Alzheimer's disease by administering an HMG-CoA reductase inhibitor selected from Lovastatin and simvastatin. (P. 3, lines 25-32)

Stalker et al. discloses that Rosuvastatin, like simvastatin, lovastatin, and fluvastatin, is an HMG-CoA reductase inhibitor.

It would have been obvious to one of ordinary skill in the art to modify the invention of Peters et al. by combining (2'R)-5'-(3-furanyl)spiro[1-azabicyclo[2.2.2]octane-3,2'-(3'H)-furo[2,3-b]pyridine] with rosuvastatin to produce the combinations described by instant claims 15 and 25, and the pharmaceutical

Art Unit: 1623

composition of claim 26, and by administering the composition to a patient suffering from Alzheimer's disease as described by instant claims 27 and 28. One of ordinary skill in the art would have been motivated to produce this combination because (2'R)-5'-(3-furanyl)spiro[1-azabicyclo[2.2.2]octane-3,2'-(3'H)-furo[2,3-b]pyridine] and statins were known to be useful for the treatment of Alzheimer's disease in the prior art and because Stalker et al. discloses that rosuvastatin functions by the same mechanism as other statins mentioned by Scolnick as being useful for treating Alzheimer's disease. One of ordinary skill in the art would reasonably have expected success because combining known therapeutic compounds, adding a pharmaceutically acceptable carrier, and administering the composition to a patient is well within the ordinary and routine level of skill in the art.

It has been held that it is *prima facie* obvious to combine two compositions, each of which is taught by the prior art to be useful for the same purpose in order to practice a third composition for the very same purpose. The idea of combining them flows logically from their having been taught individually in the prior art. See *In re Kerkhoven*, 205 USPQ 1069, CCPA 1980.

Thus the invention taken as a whole is *prima facie* obvious.

Conclusion

Claims 15, 24-26, and 28 are rejected. Claim 27 is seen to be allowable.

Reasons for the indication of allowable subject matter are as follows:

Art Unit: 1623

The prior art does not disclose any method of treating Parkinson's disease by administering to a patient suffering therefrom a statin. Although certain prior art references such as Scolnick teach that statins such as rosuvastatin are useful for treating Alzheimer's disease, one of ordinary skill in the art would not therefore conclude that they are useful for treating Parkinson's disease as well. Written description for this method is provided, for example on p. 10, lines 19-24 of the specification. Therefore claim 27 is seen to be allowable over the prior art.

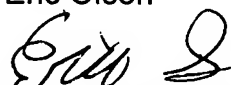

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Eric S. Olson whose telephone number is 571-272-9051. The examiner can normally be reached on Monday-Friday, 8:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Shaojia Anna Jiang can be reached on (571)272-0627. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Art Unit: 1623

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
